New Delhi, India | +91 7792039908 | ankit.nathtiwari@gmail.com | [linkedin.com/in/ankit-nath-tiwari-6b86a510b/](https://www.linkedin.com/in/ankit-nath-tiwari-6b86a510b/) | ankitnathtiwari6.github.io/portfolio

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 9+ years of experience building AI-powered products at scale. Architected and shipped a fully automated AI hiring platform — processing thousands of resumes daily — with end-to-end capabilities: AI screening, voice interview agents, semantic candidate search, and ATS integration. Deep expertise in MERN stack, LLM pipelines, RAG, voice agents (LiveKit, TTS/STT), vector search (Pinecone), and cloud deployments on AWS and GCP.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++

Frontend: React, Next.js, Svelte, Redux, AngularJS, Tailwind CSS, HTML5, CSS3, Jest

Backend: Node.js, Express.js, Django, REST API, GraphQL, WebSockets

MERN Stack: MongoDB, Express.js, React, Node.js

Databases: MongoDB, PostgreSQL, Pinecone (Vector DB), Redis

AI / LLM: OpenAI GPT-4, LangChain, LLM Pipelines, RAG, Embeddings, Vector Search, Function Calling

Voice / Speech: LiveKit, TTS (Text-to-Speech), STT (Speech-to-Text), Voice Agents, WebRTC, Real-time Audio Streaming

Agents: Voice Agents, Chat Agents, AI Recruiter Bots, Autonomous Workflow Automation

Integrations: Lever ATS, Firebase, JWT, Google Sign-In

Cloud & DevOps: AWS (S3, EC2), GCP, Docker, Kubernetes, Nginx, CI/CD

Tools: Git, GitHub, Postman, Figma, Jira, Notion

WORK EXPERIENCE

Software Engineer — Wing Assistant (M32 Labs)

Mar 2025 – Present

Wing Assistant is a US-based staffing company. Built an internal AI hiring platform that fully automates the end-to-end recruitment workflow — processing thousands of resumes daily and replacing manual screening, scheduling, and candidate evaluation with AI agents.

AI Recruiter — Intelligent Hiring Automation

- Built a full-stack AI recruiter platform (React, Node.js, MongoDB) that manages the entire hiring pipeline: posting jobs, screening applicants, shortlisting candidates, dispatching AI interviews, analysing results, and presenting a final ranked shortlist to the human recruiter — all automated.
- Integrated with Lever ATS to sync live job postings and requisitions directly into the platform — recruiters and CSMs are auto-assigned to each requisition the moment it goes live.
- Built an AI-powered semantic search using OpenAI embeddings + Pinecone vector DB so recruiters can find the right candidate from a large talent pool using plain English — faster and more accurate than keyword filters.
- System proactively suggests best-matched candidates to open requisitions by running similarity scoring between job requirements and candidate profiles in vector space — reducing time-to-shortlist significantly.
- Recruiter dashboard gives full visibility and control over every stage of the pipeline — from application volume to interview status to final shortlist — in one place.

Voice-to-Voice AI Interview Agent

- Built a fully automated voice interview agent using LiveKit, TTS, STT, WebRTC, and GPT-4 that conducts real, conversational interviews with candidates at sub-500ms latency — no human needed.
- Designed an adaptive LLM pipeline that generates dynamic follow-up questions in real time based on each candidate's previous answer — every interview is unique and context-aware.
- Interview agent is triggered automatically by the AI Recruiter once a candidate is shortlisted — creating a seamless, zero-touch pipeline from application to evaluated interview.

- Post-interview, the pipeline auto-generates a structured evaluation report with scores, key insights, strengths, red flags, and a hire/no-hire recommendation — delivered instantly to the recruiter.

Software Developer — Pesto Tech

Feb 2022 – Feb 2025

Project 1: AI Interview Platform

- Built the full-stack platform for automated video and coding interview evaluation using React, TypeScript, Node.js, MongoDB, and OpenAI.
- Integrated GPT-4 for evaluating candidate answers, generating scores, and producing structured feedback reports automatically.
- Deployed on GCP with Cloud Storage for video assets — scaled from 100 interviews/month to thousands.

Project 2: AI Hiring Platform

- Built an end-to-end AI recruitment platform — React frontend, Node.js backend, OpenAI for candidate matching, Pinecone for semantic vector search.
- Used text embeddings to represent job descriptions and candidate profiles in vector space for high-accuracy similarity matching.
- Secured with Firebase Auth + JWT; containerized with Docker, deployed on GCP with Kubernetes. Cut time-to-hire by 50%+.

Project 3: Developer Onboarding Platform

- Built an AI-powered onboarding platform that auto-parses resumes using OpenAI and generates structured developer profiles.
- Used LLM function calling to extract skills, experience, and project details from unstructured resume text.
- Reduced onboarding time by 80%, increased signup conversion by 3x; profile creation dropped from 2+ hours to 10 minutes.

Project 4: Mentor Portal

- Built a full-stack mentor management platform with Svelte, Node.js, PostgreSQL, and GraphQL.
- Handled session scheduling, feedback, timesheet generation, and payment tracking — reduced coordination time by 80%.

Project 5: Learning Management System (LMS)

- Built an LMS for live mentor sessions using React + TypeScript, Node.js, MongoDB, and REST APIs.
- Cut session coordination time from 2–3 days to under 10 minutes — doubled team productivity.

Software Engineer — Indus OS (Acquired by PhonePe)

Sep 2021 – Feb 2022

- Enhanced Developer Console for App Bazar by building the APK upload feature and resolving critical production bugs (AngularJS, Node.js, MongoDB).
- Integrated CMS with Developer Console using AWS S3 for media storage; implemented JWT auth and role-based access control.
- Optimized MongoDB queries with indexing — significantly reduced page load times.

Software Engineer — Newsbird

Jun 2019 – Aug 2021

- Built a full-featured news platform (newsbird.live) with categorized feeds, short-form video, and portals for users and reporters.
- Full MERN stack: React, Express.js, MongoDB; hosted on AWS with S3, JWT auth, role-based access, and real-time notifications.
- Designed all UI/UX wireframes in Figma before development.

Engineer — IHMCL (An NHAI Initiative), New Delhi

Nov 2016 – Nov 2018

- Key representative for deploying Hybrid ETC systems across 100+ national highway toll plazas.
- Led project planning including financial analysis, architectural reviews, and contract documentation.

GIS Engineer — Capricot Technology Pvt Ltd, New Delhi

Nov 2015 – Nov 2016

- Developed GIS applications for the Rajasthan state government and NHAI.

EDUCATION

Bachelor of Technology — NIT Patna

2010 – 2014

CGPA: 8.18 / 10
