SUMMARY

Full-Stack Software Engineer with 6+ years of experience building AI-powered products at scale. Architected and shipped a fully automated AI hiring platform — processing thousands of resumes daily — with end-to-end capabilities: AI screening, voice interview agents, semantic candidate search, and ATS integration. Deep expertise in MERN stack, LLM pipelines, RAG, voice agents (LiveKit, TTS/STT), vector search (Pinecone), and cloud deployments on AWS and GCP.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++

Frontend: React, Next.js, Svelte, Redux, AngularJS, Tailwind CSS, HTML5, CSS3, Jest

Backend: Node.js, Express.js, Django, REST API, GraphQL, WebSockets

MERN Stack: MongoDB, Express.js, React, Node.js

Databases: MongoDB, PostgreSQL, Pinecone (Vector DB), Redis

AI / LLM: OpenAI GPT-4, LangChain, LLM Pipelines, RAG, Embeddings, Vector Search, Function Calling

Voice / Speech: LiveKit, TTS, STT, Voice Agents, WebRTC, Real-time Audio Streaming

Agents: Voice Agents, Chat Agents, AI Recruiter Bots, Autonomous Workflow Automation

Integrations: Lever ATS, Firebase, JWT, Google Sign-In

Cloud & DevOps: AWS (S3, EC2), GCP, Docker, Kubernetes, Nginx, CI/CD

Tools: Git, GitHub, Postman, Figma, Jira, Notion

WORK EXPERIENCE

Software Engineer — Wing Assistant (M32 Labs) Mar 2025 – Present

Wing Assistant is a US-based staffing company. Built an internal AI hiring platform that eliminated manual recruitment work — from resume screening to final candidate shortlist — handling thousands of applicants daily without human intervention.

AI Recruiter — Intelligent Hiring Automation

- Architected an AI-driven hiring pipeline — from job posting to final ranked shortlist — cutting time-to-hire from ~25 days to under a week, with zero recruiter effort at each stage
- Integrated AI-powered resume screening directly with the company's ATS to auto-ingest new job openings — with over a million resumes parsed to date and up to 2,000 screened per day, eliminating all manual handoffs
- Built plain-language semantic search across the full candidate pool — AI proactively surfaces best-matched candidates and reduces time-to-match by 80%, from a week to a single day
- Unified the entire applicant journey into a single AI-powered dashboard — from first application to final decision — replacing scattered spreadsheets and fragmented email chains

Voice-to-Voice AI Interview Agent

- Built Automated the initial screening stage with an AI agent that conducts full voice interviews 24/7 (real-time voice pipeline with sub-400ms end-to-end latency), at any scale — handling up to 500 screening interviews per day with no recruiter involvement required.
- Reduced time spent on initial screening from days of scheduling and manual calls to under 24 hours — cutting recruiter screening effort by over 80%

Software Developer — Pesto Tech Feb 2022 – Feb 2025

Project 1: AI Interview Platform

- Built an end-to-end video and coding interview platform with an integrated code editor and AI-powered scoring — auto-generating detailed feedback reports for every candidate, removing manual grading entirely and saving hours of recruiter review time per hiring cycle
- Scaled the platform from 100 to thousands of interviews per month with zero performance degradation

Project 2: AI Hiring Platform

- Built an AI recruitment platform that matched and auto-ranked candidates against job descriptions with high accuracy — surfacing the most relevant profiles first rather than relying on keyword matching
- Cut time-to-hire by 50%+ — reducing manual sourcing effort and accelerating candidate selection across a significantly larger pool

Project 3: Developer Onboarding Platform

- Architected an AI-powered onboarding platform that auto-generated structured developer profiles from uploaded resumes — cutting profile creation from 2+ hours to under 10 minutes
- Reduced onboarding time by 80%, increased signup conversion by 3x, and eliminated manual data entry entirely

Project 4: Mentor Portal

- Centralized scheduling, feedback, timesheet generation, and payment tracking into a single mentor management platform — reducing coordination overhead by 80%

Project 5: Learning Management System (LMS)

- Engineered a full-featured LMS enabling students to access resources, submit assignments, track performance, schedule mentor and program manager calls, check live class schedules, group sessions, and raise doubts — all in one place
- Cut session coordination time from 2–3 days to under 10 minutes — doubling team productivity and eliminating fragmented communication across tools

Software Engineer — Indus OS (Acquired by PhonePe) Sep 2021 – Feb 2022

- Shipped new features and fixed critical production issues on the App Bazar developer portal — directly unblocking developers from publishing their apps.
- Integrated the content management system with the developer portal, enabling the internal team to manage media and control access without engineering support.
- Improved site performance through database optimization — noticeably faster page load times for end users.

Software Engineer — Newsbird Jun 2019 – Aug 2021

- Built a full-featured news platform (newsbird.live) with categorized feeds, short-form video, and portals for users and reporters.
- Delivered a secure, scalable platform with real-time notifications and role-based access for both users and reporters.
- Designed all UI/UX wireframes in Figma before development.

Engineer — IHMCL (An NHAI Initiative), New Delhi Nov 2016 – Nov 2018

- Key representative for deploying Hybrid ETC systems across 150+ national highway toll plazas.
- Led project planning including financial analysis, architectural reviews, and contract documentation.

GIS Engineer — Capricot Technology Pvt Ltd, New Delhi Nov 2015 – Nov 2016

- Developed GIS applications for the Rajasthan state government and NHAI.

EDUCATION

Bachelor of Technology — NIT Patna 2010 – 2014

CGPA: 8.18 / 10
